Patent No. 6821724

GENERAL INFORMATION:

APPLICANT: Michael Mittmann

APPLICANT: David Mack

APPLICANT: David Lockhart

APPLICANT: Affymerrix, Inc.

TITLE OF INVENTION: Methods of Genetic Analysis

FILE REFERENCE: 310.1.1

CURRENT APPLICATION NUMBER: US/09/396,196G

CURRENT FILING DATE: 1999-09-15

PRIOR APPLICATION NUMBER: 60/100,678

PRIOR PILING DATE: 1998-09-17

NUMBER OF SEQ ID NOS: 127806

SOFTWARE: FastSEQ for Windows Version 4.0

No. is the number of results predicted by chance to have a
score greater than or equal to the score of the result being printed,
and is derived by analysis of the total score distribution.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             Description

Publication No. US20040241651A1
GENERAL INFORMATION:
GENERAL INFORMATION:
APPLICANT: Alexander Olek
APPLICANT: Christian Piepenbrock
APPLICANT: Kurt Berlin
TITLE OF INVENTION: Detection of single nucleotide polymorhphisms [SNPs] and cytosine
TITLE OF INVENTION: mechylations
FILE REFERENCE: E01/1193/WO
CURRENT PELLING DATE: 2002-10-07
PRIOR APPLICATION NUMBER: US/10/257,017B
CURRENT FILING DATE: 2000-04-07
RIOR FILING DATE: 2000-04-07
NUMBER OF SEQ ID NOS: 382046
SEQ ID NO 20924

Sequence 1, Application US/08583276
Patent No. 5837536
GENERAL INFORMATION:
APPLICANT: McDonagh, Kevin T.
APPLICANT: Nienhuis, Arthur
APPLICANT: Tolstoshev, Paul
TITLE OF INVENTION: IMPROVED EXPRESSION OF HUMAN
TITLE OF INVENTION: MULTIDRUG RESISTANCE GENES AND IMPROVED
TITLE OF INVENTION: SELECTION OF CELLS TRANSDUCED WITH SUCH GENES
NUMBER OF SEQUENCES: 19
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              GENERAL INFORMATION:

APPLICANT: Kay, Mark A.

APPLICANT: Yant, Stephen

TITLE OF INVENTION: Methods of In Vivo Gene Transfer Using a
TITLE OF INVENTION: Methods of In Vivo Gene Transfer Using a
TITLE OF INVENTION: Aleeping Beauty Transposon System

FILE REFERENCE: STAN-16CCIP

CURRENT APPLICATION NUMBER: 2001-08-10

PRIOR PLILIG DATE: 1999-10-28

PRIOR PLILIG DATE: 1999-10-28

Patent No. 5532129

GENERAL INFORMATION:
APPLICANT: Heller, Michael J
TITLE OF INVENTION: SELF-ORGANIZING MOLECULAR PHOTONIC
TITLE OF INVENTION: STRUCTURES BASED ON CHROWOPHORE- AND FLUROPHORE-CONTAINING
TITLE OF INVENTION: POLYNUCLEOTIDES AND METHODS OF THEIR USE
.NUMBER OF SEQUENCES: 10
CORRESPONDENCE ADDRESS:
ADDRESSEE: Bingham & Fitting
STREET: 12526 High Bluff Drive, Suite 300
                                                                                                                                                                                                                                                                                                            Gaps
                                                                                                                                                                                                                                                                                                            ö

Patent No. 5565322
GENERAL INFORMATION:
GENERAL INFORMATION:
APPLICANT: Michael J. Heller
TITLE OF INVENTION: SELF-ORGANIZING MOLECULAR PHOTONIC
TITLE OF INVENTION: STRUCTURES BASED ON CHROWOPHORE- AND FLUOROPHORE-
TITLE OF INVENTION: CONTAINING POLYNUCLEOTIDES AND METHODS OF THEIR USE
NUMBER OF SEQUENCES: 11
CORRESPONDENCE ADDRESS:
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      LOCATION: 10 -

Patent No. 6162603
GENERAL INFORMATION:
APPLICANT: Michael J. Heller
TITLE OF INVENTION: SELF-ORGANIZIN
TITLE OF INVENTION: STRUCTURES BAS
TITLE OF INVENTION: POLYNUCLEOTIDE
TITLE OF INVENTION: POLYNUCLEOTIDE
TITLE OF INVENTION: THEIR USE
NUMBER OF SEQUENCES: 11
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Sequence 33, Application US/09063450
Patent No. 6109776
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            3: Lyon & Lyon
